English native | German certified C1

C++ and Unreal Engine programmer building gameplay, AI and multiplayer systems. Project work spans GAS combat, StateTree AI, replication and dedicated servers, supported by documented architecture and broader C++ desktop development. Brings multidisciplinary project collaboration and earlier experience leading teams and improving operational workflows.

SELECTED EVIDENCE

- End-to-end server-authoritative CTF and replicated spawn-eligibility systems.
- GAS combat and StateTree AI, with ongoing dedicated-server work in Onset.

01 SELECTED TECHNICAL PROJECTS

Kyoto Conflict

Student project |13-person team | Eight production weeks across the semester
Build: games-academy.itch.io/kyoto-conflict | Multiplayer participants required

- Designed and implemented the complete C++ capture-the-flag loop: pickup, carrying, dropping, returning, capture validation, scoring, reset and replication. Game state and scoring were server-authoritative in a listen-server setup.
- Built replicated zones controlling spawn eligibility; implemented spawning based on the established Lyra/Unreal model.
- Implemented team balancing and contributed Wwise integration alongside the programming team.

Onset

In development

Ongoing Unreal Engine C++ project | Code: github.com/maximoh-mmo/PortfolioTutorial

- Built combat systems with Unreal Engine's Gameplay Ability System and NPC behaviour with StateTree, connecting ability execution with AI-driven gameplay.
- Developed multiplayer and dedicated-server systems, including Steam authentication and persistence integrations using SQLite, PostgreSQL and HTTP services.

Prophecy of Ash

Student RPG | UnrealEngine 5.5 | 16-person team | Eight production weeks across the semester
Project Originator andLead Programmer | Prototype: games-academy.itch.io/prophecy-of-ash

- Proposed the project and guided its technical and creative direction while coordinating programming priorities with the team.
- Implemented object pooling, Gameplay Ability System work and combat-feedback systems to support the RPG's combat behaviour and player feedback.

02 TECHNICAL SKILLS

Programming: C++; Unreal Engine; Blueprints; gameplay systems; debugging

Gameplay and networking: Gameplay Ability System; StateTree; replication; dedicated servers; Wwise

Tools and data: Git; Qt; SQLite; PostgreSQL; HTTP integration; GitHub Actions

03 ADDITIONAL C++ PROJECT

PhotoBoss

C++desktopproject | Qt, SQLite, concurrency, GitHub Actions

- Built a concurrent image-analysis pipeline in C++ with Qt review controls and SQLite caching for unchanged files.

04 PROFESSIONAL EXPERIENCE

Case Manager

Nov 2018 - Apr 2019

DepartmentforWork and Pensions, UK

- Managed approximately 400 cases, investigating complex cases and coordinating with legal teams.

Administrative Officer

Jun 2018 - Nov 2018

NHS,UK

- Coordinated appointments and schedules for 24 health visitors across East Kent; maintained referral records and tracked cases through their lifecycle.

General Manager

Apr 2016 - Jun 2018

FiveGuys,Greenhithe,UK

- Launched a new restaurant, recruiting, training and leading a team of more than 30 staff.
- Built Excel tools for scheduling and stock management that were adopted at multiple locations; managed daily operations, staffing and operational reporting.

Earlier leadership and customer-facing roles

2000 - 2016

Hospitality,retailand telecommunications,UK

05 EDUCATION AND TRAINING

Game Programmer (GA)

Oct 2023 - Sep 2025

Games Academy, Berlin

- Full-time Game Programming programme with multidisciplinary project development in C++ and Unreal Engine.
- Completed with great success; average grade 1.5; 120 ECTS equivalent. Certificate issued Dec 2025.

Perspektiven entwickeln

Sep 2022 - Jan 2023

GBAmbH,Potsdam

- Full-time vocational orientation and development programme.

German-language training | 2019 - 2022 | Certified C1

Multimedia Technologies and Design |UniversityofKent|2003 - 2006
